

*PLASTIC RUGS*

# PLASTIC RUGS

Textiles carry endless possibilities and stories. By combining textile and plastic, the possibility to integrate and use the textiles in new ways emerges, which were previously impossible. The plastic rugs show a new interpretation of the traditional rya rug, which has received a new surface thanks to the plastic. The plastic highlights the movements of the yarn, and freezes a living, organic material solid in a moment.

The textile elements can be hung on walls and ceilings, or laid on the floor, and adds a better room experience; in part because they are visually stimulating, but also because they absorb sound. The plastic rugs propose a new way of looking at textiles and their functionality. The rugs challenge the visitors' senses and create a dialog between materials and expectations.

The three rugs are a bachelor project made at The Royal Academy at the study program Furniture, space & materials in 2020.

*PR1, 90x46x4 cm*

*PR2, 50x43x4 cm*

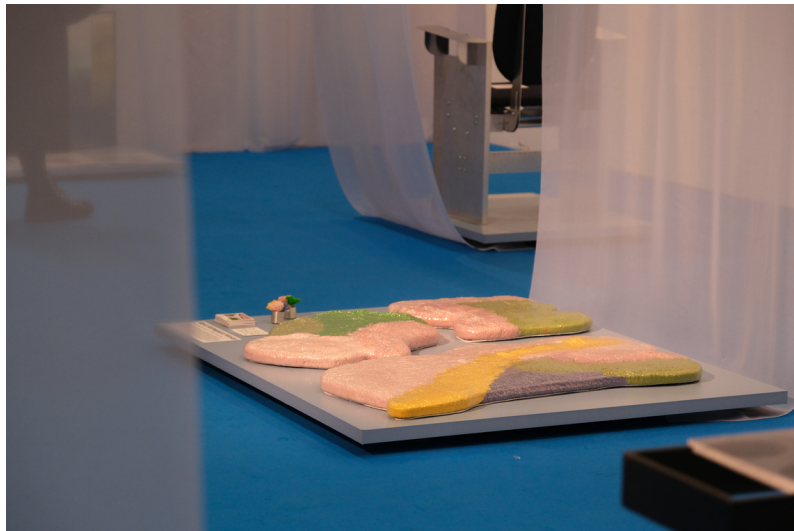

*PR3, 60x41x4 cm*
